Brand Guidelines

Modern. Fluid. Trusted.

Visual Identity & Design System — Version 2.0

Licensed Florida Public Adjusters
March 2026

1. Brand vision

Claim Remedy Adjusters is evolving. The new brand identity moves away from the traditional insurance look and toward something modern, fluid, and human — a brand that feels as responsive and transparent as the service itself.

The visual system is built around the concept of fluidity: smooth gradients, glass-like surfaces, flowing motion, and clean typography. Every element should feel like water in motion — calm, powerful, and always moving forward.

Brand pillars

- **Advocacy —** We represent homeowners, never insurance companies
- **Clarity —** Clean, glass-inspired design that builds instant credibility
- **Fluidity —** Smooth interactions, fluid animations, zero friction
- **Experience —** 10+ years of hands-on Florida claim experience

Brand personality

We are	We are not
Confident and calm	Aggressive or fear-based
Modern and fluid	Corporate or templated
Clear and direct	Full of legal jargon
Professional with warmth	Cold or impersonal
Data-backed	Making empty promises

Taglines

Primary: *"Your claim. Our fight."*

Secondary: *"No recovery, no fee."*

Tertiary: *"Navigating claims. Delivering results."*

---

2. Logo system

The CRA logo features a house icon divided into four quadrants representing key damage types (storm, water, fire, structural) alongside bold sans-serif wordmark text. Use the appropriate version for each context.

Horizontal (primary)

Navbar, email signatures, letterheads, wide placements.

Stacked (secondary)

Footer, social avatars, compact or square placements.

Usage rules

- Current logos have black JPG backgrounds — place only on dark (midnight/deep) surfaces
- Apply mix-blend-mode: lighten in CSS to make black pixels transparent on dark backgrounds
- Request transparent PNG exports for use on light or gradient backgrounds
- Minimum clear space: equal to the house icon height on all sides
- Minimum display width: 160px screen / 1.5 inches print
- Never stretch, rotate, skew, add shadows, or recolor the logo

3. Color palette

The palette is a modern evolution of the existing CRA blue. We've deepened the darks, added richness to the midtones, and introduced a vivid electric blue that feels alive and forward-looking. The result is a system that supports glass-like UI, fluid gradients, and layered depth.

Core palette

Midnight	Ocean	Electric
#0B1120	#1B3A5C	#2E8BFF

Extended palette

Deep	Ice	Frost	Snow
#111B2E	#7EC8F2	#E8F4FD	#F8FBFE

Neutrals

Charcoal	Slate	Silver
#1E293B		#CBD5E1

Usage ratios

- **50% Midnight / Deep —** Backgrounds, hero sections, navbars, footer
- **25% Snow / Frost —** Section backgrounds, cards, content areas, body text zones
- **15% Electric Blue —** CTAs, buttons, active states, key accent moments
- **10% Ocean / Ice —** Glass overlays, hover highlights, progress indicators, secondary accents

Gradient system

Gradients are central to the fluid aesthetic. Use them on hero backgrounds, section transitions, glass cards, and CTA surfaces. Always flow from dark to light (left-to-right or top-to-bottom).

Gradient	Values	Use case
Hero flow	#0B1120 → #1B3A5C	Hero backgrounds, full-bleed sections
Electric sweep	#2E8BFF → #7EC8F2	CTA buttons, progress bars, active states
Glass surface	rgba(255,255,255,0.05) → 0.12	Glass cards, frosted overlays
Frost fade	#E8F4FD → #FFFFFF	Light section transitions

4. Typography

The type system is clean, modern, and highly readable. We use a single font family — Inter — across all touchpoints for consistency and a contemporary feel. Weight contrast creates the hierarchy instead of font pairing.

Primary typeface — Inter

Your claim deserves proper representation.

Inter is a clean, geometric sans-serif designed for digital screens. It's open-source via Google Fonts, renders crisply at all sizes, and supports the modern fluid aesthetic. Use weight contrast (300–700) to create hierarchy.

Alternate display typeface — Sora

We fight for what you deserve.

Sora is a geometric sans with slightly rounded terminals — modern and approachable. Use for hero headlines and marketing headers when you want more personality. Available on Google Fonts.

Type scale

Element	Font	Size	Weight	Color
Hero headline	Sora	56–72px	700	Snow
Section heading	Inter	36–44px	700	Midnight
Sub-heading	Inter	24–28px	600	Ocean
Body copy	Inter	16–18px	400	Charcoal
Body (on dark)	Inter	16–18px	300	Silver
Navigation	Inter	14–15px	500	Snow
Buttons / CTAs	Inter	14–16px	600	White
Caption / meta	Inter	12–13px	400	Slate

5. Glass UI system

The defining visual feature of the new CRA brand is the glass/frosted aesthetic. This creates depth, layering, and a premium feel without relying on heavy shadows or borders.

Glass card recipe

```
background: rgba(255, 255, 255, 0.06);
backdrop-filter: blur(20px) saturate(1.4);
border: 1px solid rgba(255, 255, 255, 0.08);
border-radius: 16px;
box-shadow: 0 8px 32px rgba(0, 0, 0, 0.12);
```

Glass card on light backgrounds

```
background: rgba(255, 255, 255, 0.65);
backdrop-filter: blur(16px);
border: 1px solid rgba(46, 139, 255, 0.12);
border-radius: 16px;
```

When to use glass

- Service cards, stat counters, testimonial cards
- Navbar (frosted, sticky, with blur)
- Modals, pop-ups, and overlay panels
- Floating CTA bars on mobile

When NOT to use glass

- Body text areas — use solid backgrounds for readability
- Forms and inputs — solid white/frost for clarity
- On top of busy photography without a dark overlay

---

6. Motion & animation

Motion is what makes the brand feel fluid. Every animation should feel smooth, natural, and purposeful — like water flowing. Use GSAP with ScrollTrigger for scroll-driven animations.

Core motion principles

Principle	Application
Scroll snap	scroll-snap-type: y proximity on body; each section snaps softly into view
Parallax depth	Background images move at 50% scroll speed via GSAP scrub
Text reveal	Elements fade up (y:50, opacity:0) with power3.out easing at 85% viewport

Stagger	Sibling elements animate 0.1–0.12s apart for cascade feel
Curtain effect	Sections stack with increasing z-index; hero scales to 0.96 as you scroll past
Glass hover	Cards lift 2px with increased blur on hover (0.3s ease)
Gradient shift	Background gradients subtly rotate or shift hue on scroll

Easing curves

- **Default —** Use power3.out (or cubic-bezier(0.33, 1, 0.68, 1)) for reveals
- **Transitions —** Use power2.inOut for transitions between states
- **Avoid —** Never use linear easing — it feels mechanical and breaks the fluid feel

Accessibility

- All animations must respect prefers-reduced-motion: reduce
- Provide instant state changes (no motion) when reduced motion is enabled
- Scroll snap should degrade gracefully to normal scroll

7. Buttons & components

Button styles

Type	Style	Use case
Primary	Electric (#2E8BFF) bg, white text, 12px radius, 600 weight	Main CTAs: Free Claim Review, Call Now
Secondary	Transparent bg, 1px Electric border, Electric text	Secondary actions: Learn More, See Services
Ghost	Transparent bg, 1px rgba white border, white text	On dark/gradient backgrounds: Speak With Us
Glass	Glass card bg with blur, white text	Floating CTAs, mobile sticky bars

Button behavior

- Hover: lighten 8%, lift 1px with soft shadow
- Active: darken 4%, scale(0.98)
- Focus: 2px Electric ring offset by 2px
- Transition: all 0.25s cubic-bezier(0.33, 1, 0.68, 1)
- Minimum touch target: 44px height on mobile

Border radius system

Token	Value	Use
radius-sm	8px	Inputs, small pills, tags
radius-md	12px	Buttons, badges, tooltips
radius-lg	16px	Cards, modals, glass panels
radius-xl	24px	Hero containers, feature blocks
radius-full	9999px	Avatars, pill buttons

8. Photography & imagery

Photography should feel authentic, warm, and grounded in South Florida. Avoid generic stock. Prioritize real property imagery, real people, and real damage documentation.

Subject priorities

1. Florida residential properties — exteriors, rooftops, neighborhoods
2. Property damage — real documentation of water, storm, fire, roof damage

3. Team at work — inspections, documentation, client meetings
4. South Florida environment — sky, coast, palms, suburban architecture

Photo treatment

- Slight cool/blue grade to shadows — aligns with the midnight palette
- Moderate contrast, not overly processed — natural and honest
- Hero images: apply a midnight overlay at 55–70% opacity for text legibility
- Never use HDR, heavy vignettes, or oversaturated edits
- Pair photography with glass overlays for the layered depth look

---

9. Tone & voice

CRA speaks like a knowledgeable ally — not a salesperson. We're talking to homeowners dealing with stressful property damage. Our words should feel reassuring, competent, and human.

Voice principles

- **Results first —** Lead with the homeowner's outcome, not our process
- **Direct —** Short sentences, active verbs, zero fluff
- **Evidence-backed —** Real case numbers and specifics over vague claims
- **Human —** We're people helping people, not a faceless company

Copy examples

Avoid	Use
"We provide comprehensive public adjusting services to help maximize your insurance claim settlement potential."	*"Your insurer offered $18K. We recovered $147K. That's what having an advocate means."*

---

10. Technical implementation

Stack

- Vanilla HTML / CSS / JavaScript — no frameworks
- GSAP 3 + ScrollTrigger for all scroll-driven animations
- Google Fonts: Inter (primary), Sora (display)
- Deployed via GitHub → Vercel
- Mobile-first responsive — fluid typography with clamp()

CSS custom properties

```
:root {
  --midnight: #0B1120;
  --deep: #111B2E;
  --ocean: #1B3A5C;
  --electric: #2E8BFF;
  --ice: #7EC8F2;
  --frost: #E8F4FD;
  --snow: #F8FBFE;
  --charcoal: #1E293B;
  --slate: #64748B;
  --silver: #CBD5E1;
  --glass-blue: #3B82F6;
  --radius-sm: 8px;
  --radius-md: 12px;
  --radius-lg: 16px;
  --radius-xl: 24px;
}
```
